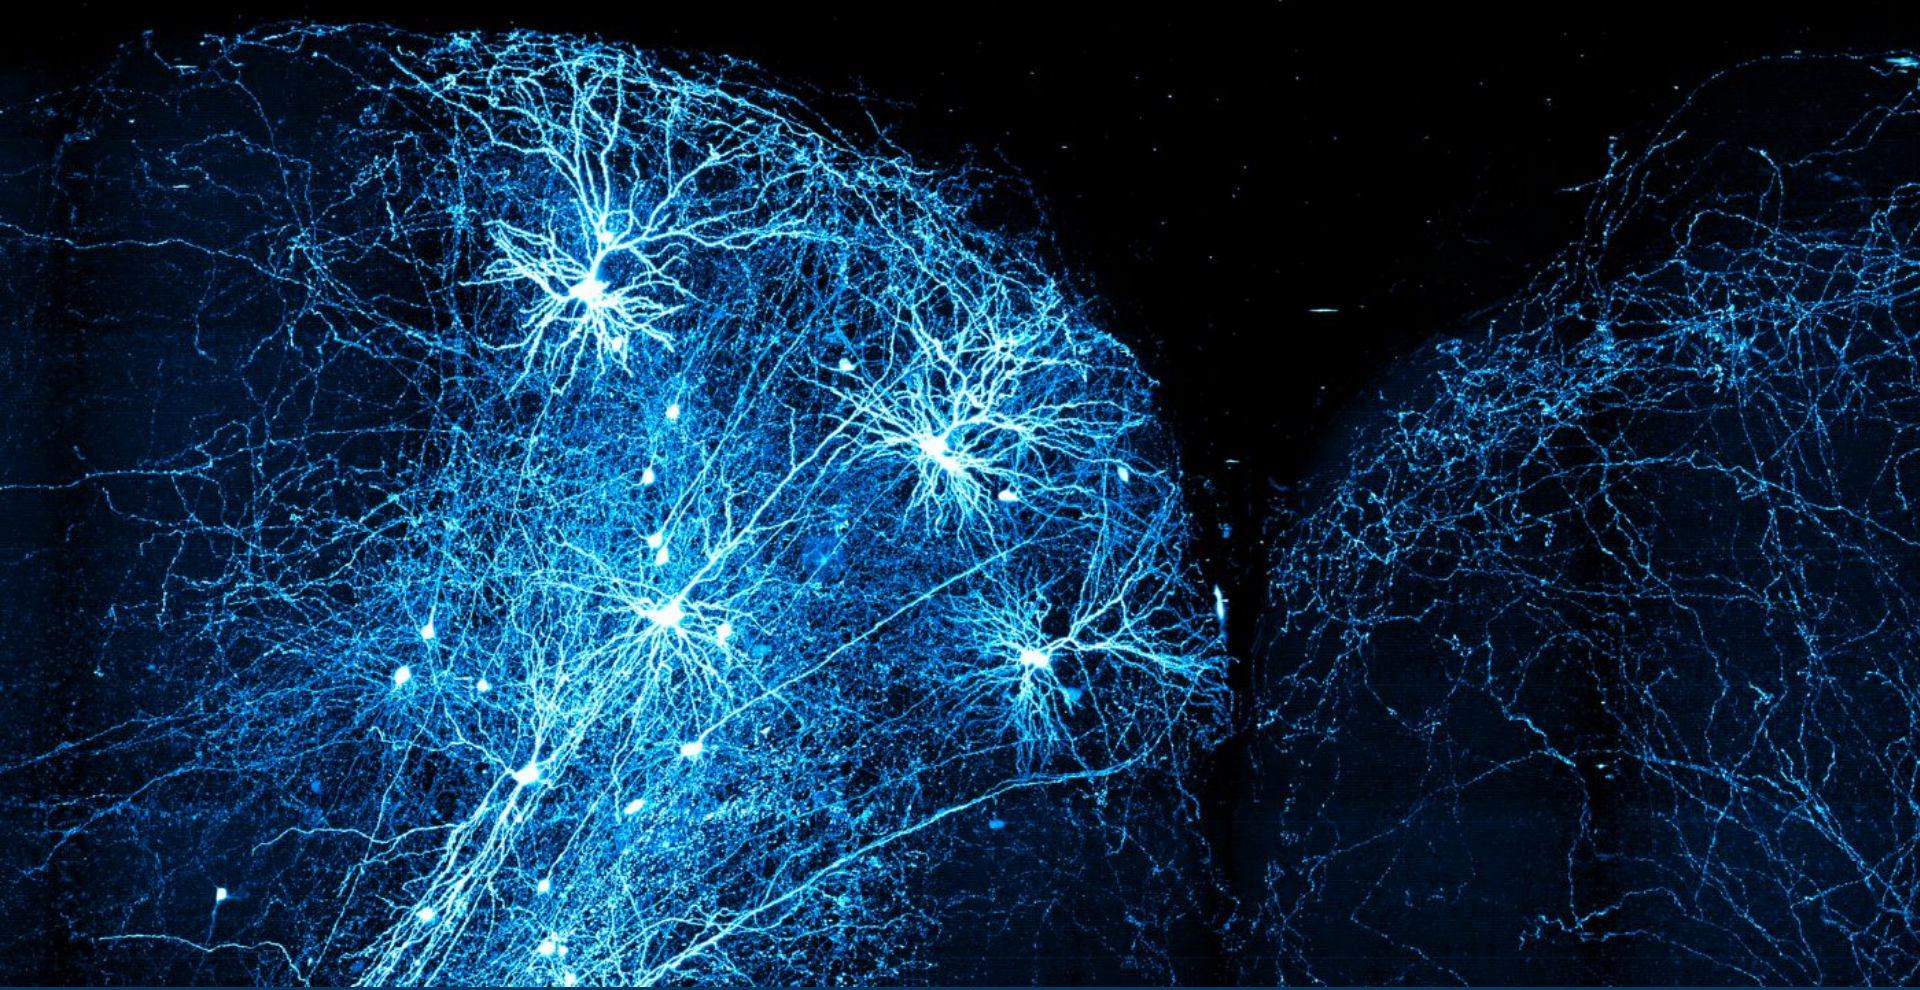
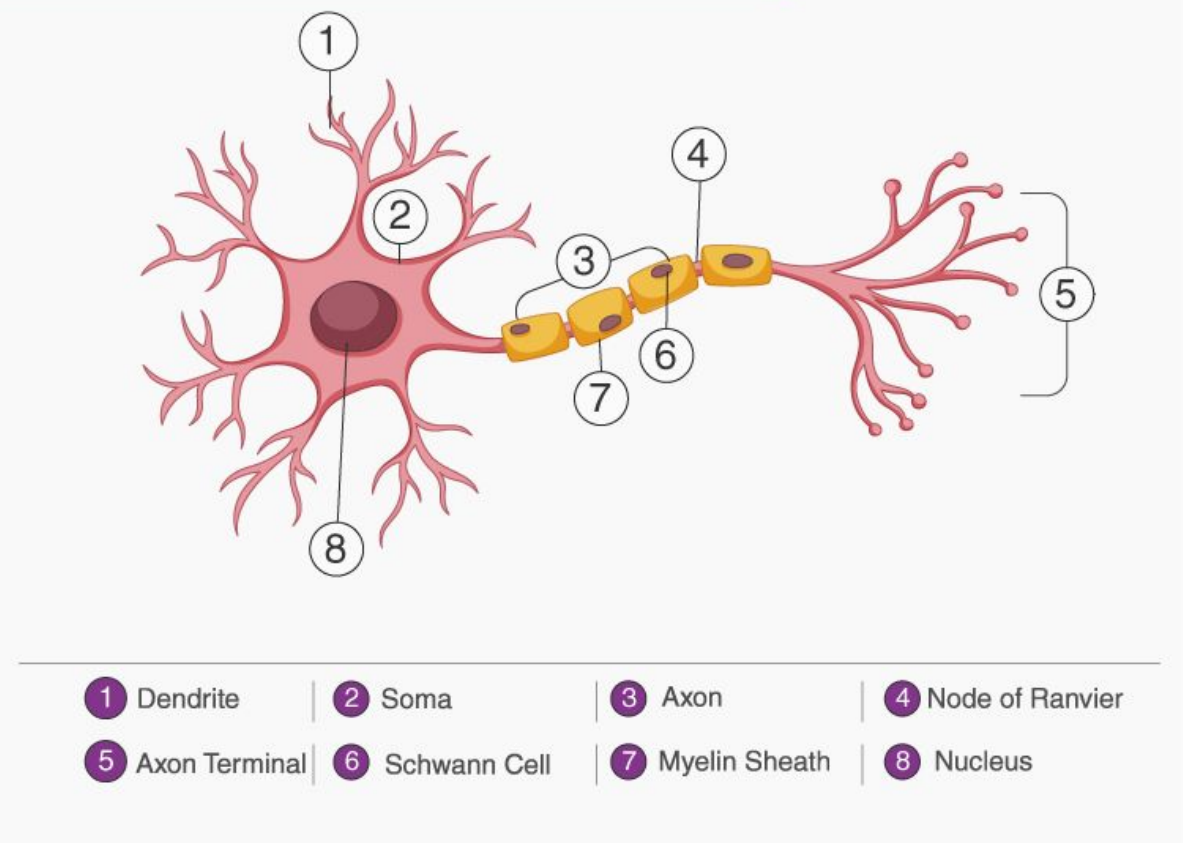
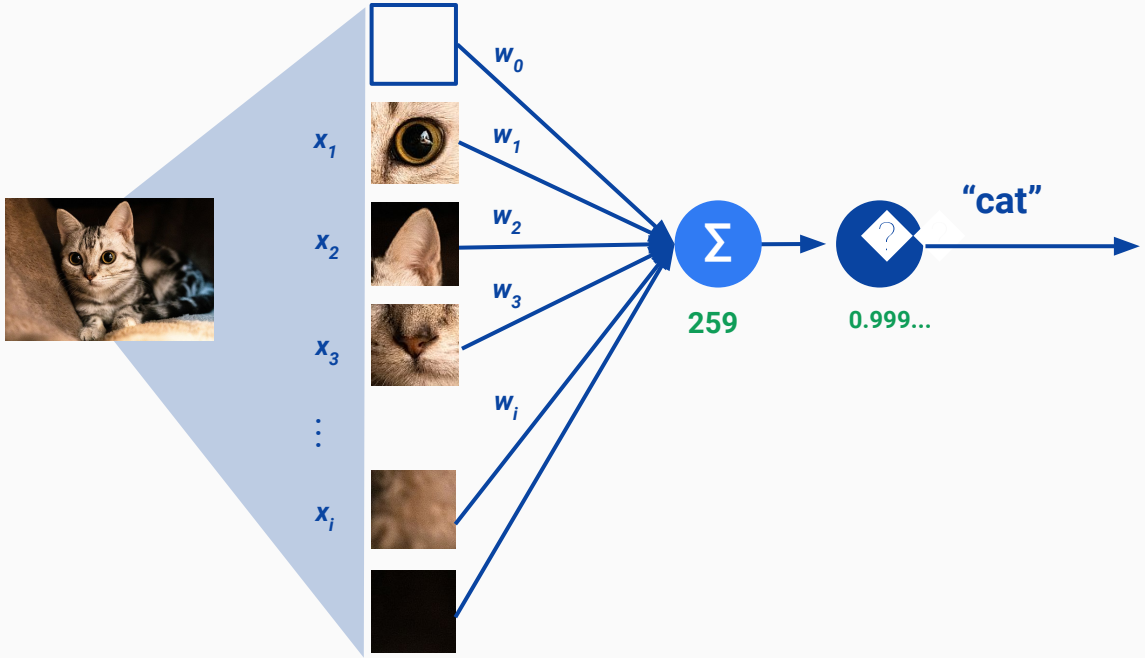
The Perceptron

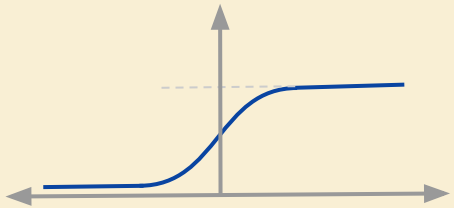


Brain Map (Source: [The Scientist)]



A single neuron



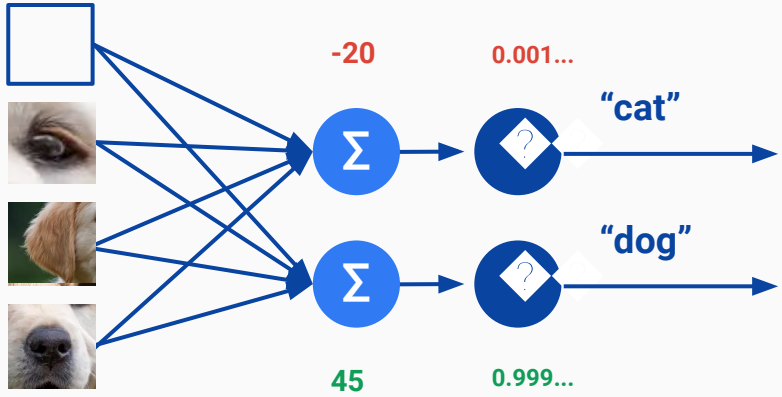


$$\hat{y} = \sigma(w_0 + \sum x_i w_i)$$

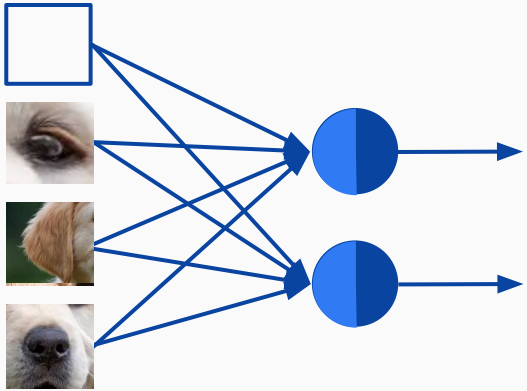
$$\hat{y} = \sigma(w_0 + \mathbb{X}^T \mathbb{W})$$

A single perceptron

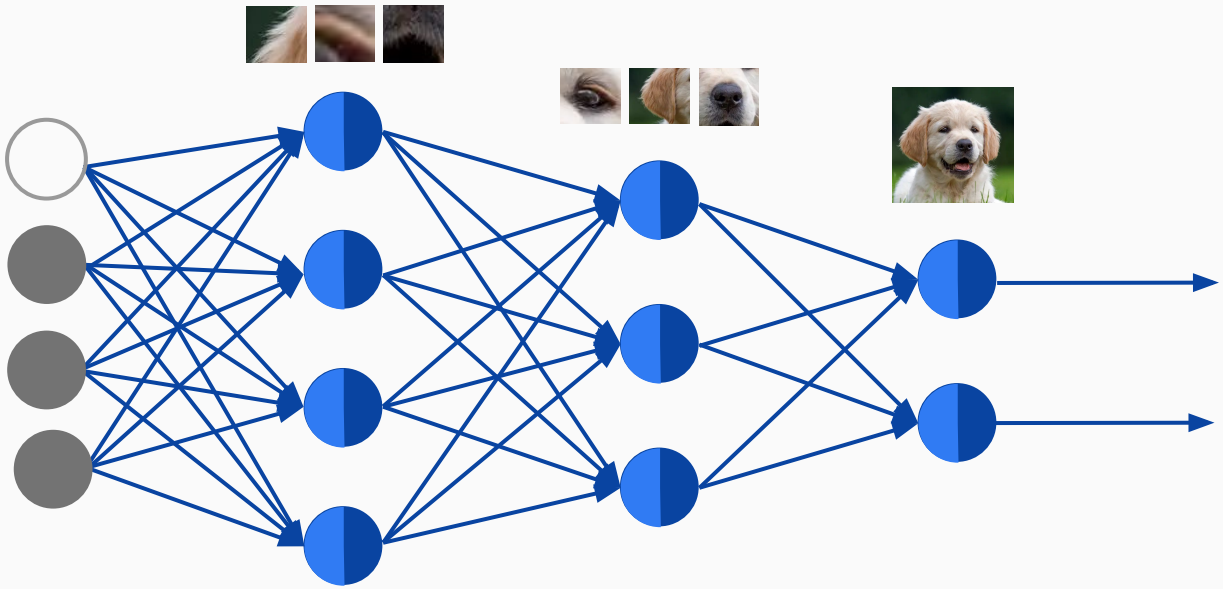
The Neural Network



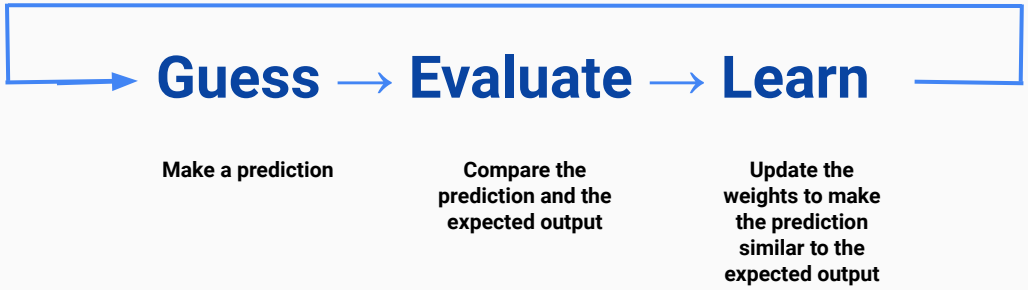
2-Class Classification



2-Class Classification



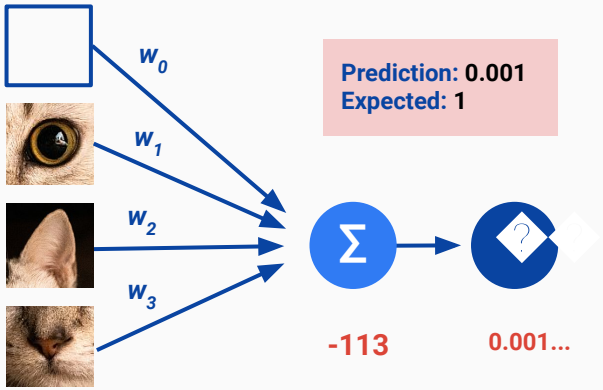
A Neural Network



The Training Process

Evaluate

Compare the prediction and the expected output



Prediction: 0.001
Expected: 1

Quantify the 'Loss'

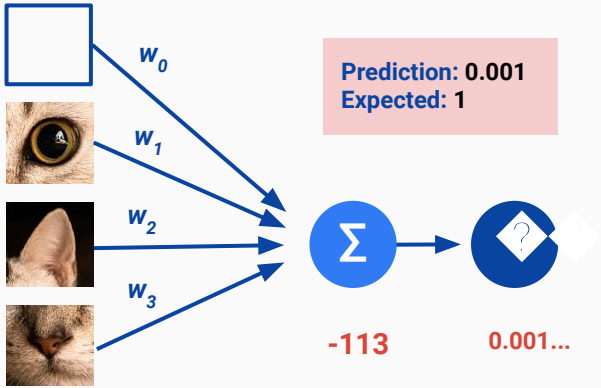
$$L_i = \text{Prediction}_i - \text{Expected}_i$$
$$J = \text{Sum}(L_i)$$

We want to optimize this 'Loss' by updating the weights

$$\mathbb{L}(f(x^{(i)}, \mathbb{W}), y^{(i)})$$
$$\mathbb{J}(\mathbb{W}) = \frac{1}{n}\sum_{i=1}^{n} \mathbb{L}(f(x^{(i)}, \mathbb{W}), y^{(i)})$$

Learn

Update the weights to make the prediction similar to the expected output

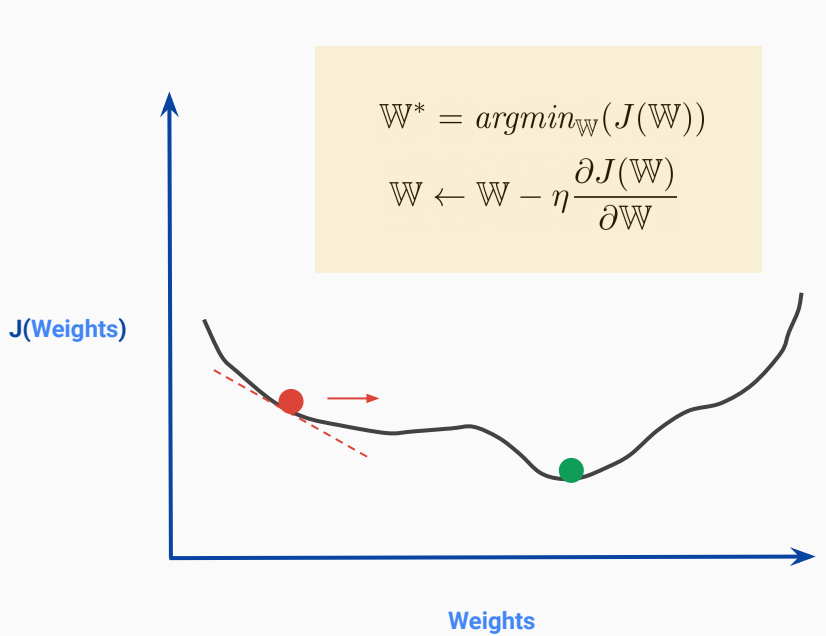


Prediction: 0.001
Expected: 1

Gradient Descent

$$\mathbb{W}^* = argmin_{\mathbb{W}}(J(\mathbb{W}))$$

$$\mathbb{W} \leftarrow \mathbb{W} - \eta \frac{\partial J(\mathbb{W})}{\partial \mathbb{W}}$$



Ofcourse, it isn't that easy
